

# You'd expect nothing but the best from New Zealand's No. 1 dry cow therapy.

## New dual tip syringe:

- ▶ Optimises the health of the teat canal.
- ▶ Minimises introduction of bacteria.

Managing teat health in the dry period is essential to reduce the risk of mastitis. Ceppravin's innovative dual-tip syringe offers the choice of a shorter, thinner nozzle that helps reduce teat canal damage and the risk of bacterial contamination.

You'd expect nothing less from New Zealand's No. 1 dry cow therapy.
