

What does more to ensure every lamb survives?

NILVAX®:
It's not luck. It's NILVAX.

Pulpy kidney is the biggest killer of lambs.

Surviving Pulpy kidney is an antibody numbers game. More antibodies in ewe colostrum means a greater chance lambs survive. This is especially important for twins and triplets that share colostrum.

NILVAX should be your pre-lamb vaccine of choice as more ewes respond, with higher antibody levels than traditional 5 in 1s.

NILVAX provides more antibodies – and that's the best means of ensuring more lambs survive.

NILVAX – Success starts at pre-lamb.
