

When every lamb counts, you can count on MULTINE to protect them.

MULTINE® trusted for over 30 years to protect your lambs.

Clostridial diseases in lambs give little warning, strike randomly and are almost always fatal. They cost you lambs and lose you productivity and profits. Vaccinating your lambs at weaning is the only practical way to effectively continue to protect against clostridial diseases – the single biggest killer of lambs.

At weaning, choose MULTINE the trusted vaccine to protect lambs against clostridial diseases.

Vaccinating your ewes at pre-lamb passively protects your lambs through to weaning. Lambs then require a 2-shot vaccination programme for full year clostridial protection. Lambs require a vaccination (sensitiser) at weaning and a second vaccination (booster) 4–6 weeks later for full year protection against clostridial diseases.

MULTINE:
New Zealand's
most trusted 5 in 1.
Pre-tup, pre-lamb
and weaning.
